

White Raku Clay

Name	Brief Description	Temperature	Price per bag (12.5kg unless otherwise stated)
PF520 Ashraf Hanna	The very best white raku body on the market. With over 58% molochite, this body can withstand the most extreme thermal shock. This is due to both the high alumina plastic ball clay and the three different grades of molochite. This body has very low shrinkage, a medium texture and is highly resistant to warping and cracking.	900 - 1300°C	£18.18

Buff Raku Clay

Name	Brief Description	Temperature	Price per bag (12.5kg unless otherwise stated)
1154 Raku Clay	Superb thermal shock resistance. Low shrinkage. Designed for Raku process but also suitable for slabbing etc., and as a stoneware body. Coarse Texture. Brownish/Buff.	900 - 1300°C	£11.75
E/S180 Earthstone Sculpture Pizza Oven Clay	A very coarsely grogged clay with a beautiful course texture. Suitable for pizza ovens, raku, large sculptures, saggars and hand built items. This fireclay based body using graded cordierite grog has a very low shrinkage, making it highly resistant to warping, cracking and thermal shock. Suitable for oxidation and reduction firing.	950 - 1300°C	£11.93
E/S60 Earthstone Smooth Crank	As crank but with a finer grog to give a smoother surface texture.	1200 - 1300°C	£10.30

**1153 Industrial Craft
Crank**

Suitable for large sculptural work, slabbing, saggars and Raku. Very refractory open texture and low shrinkage. Good warp resistance. Coarse Texture. Brownish Buff.

1210 - 1300°C

£15.96
